Sac

From our Syllabus.

Hunter College regards acts of academic dishonesty (e.g., plagiarism, cheating on examinations, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. All incidents of cheating will be reported to the Office of Student Conduct in the Vice President for Student Affairs and Dean of Students office.

イロト 不得 トイヨト イヨト 二日

 Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"
- Hint: Convert to numbers, increment, and convert back to strings.

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"
- Hint: Convert to numbers, increment, and convert back to strings.

Pseudocode same for both questions:

Get user input.

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"
- Hint: Convert to numbers, increment, and convert back to strings.

Pseudocode same for both questions:

- Get user input.
- 2 Convert to standard decimal number.

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"
- Hint: Convert to numbers, increment, and convert back to strings.

Pseudocode same for both questions:

- Get user input.
- 2 Convert to standard decimal number.
- 3 Add one (increment) the standard decimal number.

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"
- Hint: Convert to numbers, increment, and convert back to strings.

Pseudocode same for both questions:

- Get user input.
- 2 Convert to standard decimal number.
- 3 Add one (increment) the standard decimal number.
- ④ Convert back to your format.

CSci 127 (Hunter)

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"
- Hint: Convert to numbers, increment, and convert back to strings.

Pseudocode same for both questions:

- Get user input.
- 2 Convert to standard decimal number.
- 3 Add one (increment) the standard decimal number.
- ④ Convert back to your format.
- 9 Print the result.

CSci 127 (Hunter)

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"

CSci 127 (Hunter)

▲□▶ ▲□▶ ▲三▶ ▲三▶ 三三 ろの⊙

- Unit Testing: testing individual units/functions/blocks of code to verify correctness. Often automated (e.g. gradescope).
- To test all branches of code, would need to test all inputs: "zero", "one",..., "nine", & some bad inputs. Also important to test edge cases.
- If large, design automated tests that will "cover" as many branches as possible and use randomly generated inputs:

```
names = ["zero","one",...,"nine"]
x = random.randrange(10)
if x == convert2Decimal(names[x]):
    #PASS
else:
```

# Challenge:

• Using what you know from Python, predict what the C++ code will do:

```
//Another C++ program, demonstrating variables
 2
   #include <iostream>
   using namespace std;
   int main ()
6 - {
    int year;
   cout << "Enter a number: ";</pre>
     cin >> year;
     cout << "Hello " << year << "!!\n\n";
11
      return 0;
12
```

#### onlinegdb demo

int main () int year:

#### (Demo with onlinegdb)

#### Final Overview: Rules

You will get credit for you answers only if:

990

You will get credit for you answers only if:

• Your answer uses language constructs that were covered in the course.

200

イロト 不得 トイヨト イヨト 二日

You will get credit for you answers only if:

- Your answer uses language constructs that were covered in the course.
- Your answer is not oddly identically to that of another student or is the answer for another version of the exam.

イロト イポト イヨト イヨト

You will get credit for you answers only if:

- Your answer uses language constructs that were covered in the course.
- Your answer is not oddly identically to that of another student or is the answer for another version of the exam.

All acts of academic dishonesty will be reported to the Office of Academic and Student Affairs and will result in a 0 grade on the exam.

イロト 不得 トイヨト イヨト ヨー のくや

For each question, write the function header (name & inputs) and return values (often called the Application Programming Interface (API)):

# • Write a function that takes a weight in kilograms and returns the weight in pounds.

イロト 不得 トイヨト イヨト 二日

For each question, write the function header (name & inputs) and return values (often called the Application Programming Interface (API)):

# • Write a function that takes a weight in kilograms and returns the weight in pounds.

def kg2lbs(kg):

...
return(lbs)

イロト 不得 トイヨト イヨト ヨー のくや

For each question, write the function header (name & inputs) and return values (often called the Application Programming Interface (API)):

# • Write a function that takes a weight in kilograms and returns the weight in pounds.

```
def kg2lbs(kg)
    lbs = kg * 2.2
    return(lbs)
```

For each question, write the function header (name & inputs) and return values (often called the Application Programming Interface (API)):

#### • Write a function that takes a string and returns its length.

イロト イポト イヨト イヨト 二日

For each question, write the function header (name & inputs) and return values (often called the Application Programming Interface (API)):

• Write a function that takes a string and returns its length.

```
def sLength(str):
```

```
...
return(length)
```

イロト イポト イヨト イヨト 二日

For each question, write the function header (name & inputs) and return values (often called the Application Programming Interface (API)):

• Write a function that takes a string and returns its length.

```
def sLength(str):
    length = len(str)
    return(length)
```

イロト 不得 トイヨト イヨト 二日

For each question, write the function header (name & inputs) and return values (often called the Application Programming Interface (API)):

# • Write a function that, given a DataFrame, returns the minimal value in the "Manhattan" column.
