Ceasar Ciper: hints for P9 of programming assignments

```
word = input("Enter a string: ")
codedWord = ""
shift = 2 #shift two letters
for ch in word:
   offset = ord(ch) - ord('A') #distance to 'A'
   wrap = (offset + shift) % ? # %: remainder operator
   #TODO: compute new letter, call it newChar
   #TODO: add newChar to the end (right) of coded word
print("After shifting", shift, "letters,", \
   word, "becomes", codedWord)
```

CSci 127 (Hunter)

February 14, 2023 2 / 41

Old Business: Reverse a String

Purpose: enter a string. Get its reversed version and print. Input: a string

Output: reversed version of the input string

Process:

- Take interactive input from users.
- Initialize reversed string to be empty.
- Find each letter in the string, from left (beginning) to right (end),
 - ► concatenate the current letter to the left (aka front) of reversed string
- Print reversed string.

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ − ∽ Q (~

Code to reverse a string

```
#purpose: reverse a string
original = input("Enter a string: ")
reverse = ""
for ch in original:
    reverse = ch + reverse
print("reversed string is", reverse)
```

For more details or other implementations, watch video 1 and video 2.

CSci 127 (Hunter)

Unicode (generalization of ASCII)

#google "subscript 2 unicode" and get 2082

print ("x\u2082") #print x_subscript_2, \u means unicode #2082 is unicode for subscript 2

#google "superscript 2 unicode" and get 00B2

print("x\u00B2") #print x_superscript_2
#00B2 is unicode for superscript 2

program to illustrate unicodes for subscript 2 and superscript 2

Indexing and Slicing Lists Example

```
daysList = ["Mon", "Tue", "Wed", "Thu", "Fri", "Sat", "Sun"]
size = len(daysList) #find out number of elements in daysList
for i in range(size):
    print (daysList [i], end="")
    \#ends = "" means printed items are separated by a space
print() #print a new line
print (" daysList [0] =", daysList [0])
print (" daysList [-1] =", daysList [-1])
print (" daysList [" + str( size -1) + "] = ", daysList [ size -1])
print(" daysList [" + str(-size) + "] =", daysList[-size])
print(" daysList[" + str(-size+1) + "] = ", daysList[-size+1])
print (" daysList [0:2] =", daysList [0:2])
print (" daysList [1:5:2] =", daysList [1:5:2])
print(" daysList [1:6:2] =", daysList [1:6:2])
print (" daysList [-5:-1:3] =", daysList [-5:-1:3])
```

- Hexcodes (base-16 numbers)...

CSci 127 (Hunter)

Decimal and Hexadecimal

	decimal	hexadecimal
base	10	16
digits	0-9	0-9, A (10) - F (15)
eg	$205 = 2 * 10^2 + 0 * 10^1 + 5 * 10^0$	$CD_{16} = 12 * 16^1 + 13 = 205_{10}$
	$255 = 2 * 10^2 + 5 * 10^1 + 5 * 10^0$	$FF_{16} = 15 * 16^1 + 15 = 255_{10}$

Color Name	HEX	Color
Black	<u>#000000</u>	
Navy	<u>#000080</u>	
DarkBlue	<u>#00008B</u>	
MediumBlue	#0000CD	
Blue	#0000FF	

• Can specify by numbers (RGB):

Color illustration: four ways to define color

```
import turtle
teddy = turtle . Turtle()
teddy.pensize(5)
teddy.color("yellow") #define color by name
teddy.forward(40)
teddy. left (90)
teddy. color (0.0, 1.0, 1.0) #define color by rgb fraction
teddy.forward(50)
turtle .colormode(255)
teddy. left (90)
teddy.color(255, 0, 255) #define color by rgb
teddy.forward(60)
teddy. left (90)
teddy. color ("\#00FF00") \#define color by hexadecimal string
teddy.forward(70)
```

```
Challenge (Group Work): link to trinket
import turtle
teddy = turtle . Turtle()
names = ["violet", "purple", "indigo", "lavender"]
for c in names:
    teddy.color(c)
    teddy. left (60)
    teddy.forward(40)
    teddy.dot(10)
teddy.penup()
teddy.forward(100)
teddy.pendown()
hexNames = ["#FF00FF", "#990099", "#550055", "#111111"]
for c in hexNames:
    teddy.color(c)
    teddy. left (60)
    teddy.forward(40)
    teddy.dot(10)

Recap

• In Python, we introduced:

- Indexing and Slicing Lists or Strings
- Arithmetic
- Colors
- Hexadecimal Notation

Practice Quiz & Final Questions

- Since you must pass the final exam to pass the course, we end every lecture with final exam review.
- Pull out something to write on (not to be turned in).
- Lightning rounds:
 - write as much you can for 60 seconds;
 - followed by answer; and
 - repeat.
- Past exams are on the webpage (under Final Exam Information).
- We're starting with Fall 2017, Version 2.

CSci 127 (Hunter)

Weekly Reminders!

Before next lecture, don't forget to:

- Work on this week's Online Lab
- Schedule an appointment to take the Quiz in lab 1001G Hunter North
- If you haven't already, schedule an appointment to take the Code Review (every week) in lab 1001G Hunter North
- Submit this week's 5 programming assignments (programs 11-15)
- If you need help, schedule an appointment for Tutoring in lab 1001G 11:30am-5:30PM (the last appointment starts at 5:15PM)
- Take the Lecture Preview on Blackboard on Monday (or no later than 10:15am on Tuesday)

CSci 127 (Hunter)

Lecture Slips & Writing Boards

• Return writing boards as you leave.
