• How do I prepare for the final exam?

Assuming you are already attending lecture meetings and reading the Online Lab each week,

- Take the quizzes, if you get a wrong answer, review it and make sure you understand.
- Work-on and **understand** the programming assignments.
- ► Take past exams available on the course webpage. Take it without looking at the answers (give yourself 1.5 hours) then compare it with the answer key.

Sac

#### GIS Data

What is GIS data?

• A geographic information system (GIS) consists of integrated computer hardware and software that store, manage, analyze, edit, output, and visualize geographic data.

We can use a python library called Folium to access this kind of data and generate HTML files that display interactive maps when opened in a browser window.

 Python has a built-in package for generating pseudo-random numbers.

To use:

import random

• Useful command to generate whole numbers: random.randrange(start,stop,step) which gives a number chosen randomly from the specified range.

import turtle import random

trey = turtle.Turtle() trey.speed(10)

#### for i in range(100): trey.forward(10) a = random, randranae(0, 360, 90)trey.right(a)

Sac

• Python has a built-in package for generating pseudo-random numbers.

To use:

import random

• Useful command to generate whole numbers:

random.randrange(start,stop,step) which gives a number chosen randomly from the specified range.

• Useful command to generate real numbers:

import turtle
import random

trey = turtle.Turtle()
trey.speed(10)

# for i in range(100): trey.forward(10) a = random.randrange(0,360,90) trey.right(a)

• Python has a built-in package for generating pseudo-random numbers.

To use:

import random

Useful command to generate whole numbers:

random.randrange(start,stop,step) which gives a number chosen randomly from the specified range.

 Useful command to generate real numbers: random.random()

which gives a number chosen (uniformly) at random from [0.0,1.0).

Very useful for simulations, games, and testing.

import turtle import random

trey = turtle.Turtle()
trey.speed(10)

# for i in range(100): trey.forward(10) a = random.randrange(0,360,90) trey.right(a)

#### Today's Topics

- Recap: Functions & Top Down Design
- Mapping GIS Data
- Random Numbers
- Indefinite Loops

200

#### Challenge:

Predict what the code will do:

```
1 dist = int(input("Enter distance: "))
2 while dist < 0:
3 print("Distances cannot be negative.")
4 dist = int(input("Enter distance: "))
5
6 print("The distance entered is", dist)</pre>
```

イロト イロト イヨト

- Top-down design: breaking into subproblems, and implementing each part separately.
- Excellent approach: can then test each part separately before adding it to a large program.

- Top-down design: breaking into subproblems, and implementing each part separately.
- Excellent approach: can then test each part separately before adding it to a large program.
- When possible, design so that your code is flexible to be reused ("code reuse").

- Top-down design: breaking into subproblems, and implementing each part separately.
- Excellent approach: can then test each part separately before adding it to a large program.
- When possible, design so that your code is flexible to be reused ("code reuse").
- Introduced a Python library, Folium for creating interactive HTML maps.

- Top-down design: breaking into subproblems, and implementing each part separately.
- Excellent approach: can then test each part separately before adding it to a large program.
- When possible, design so that your code is flexible to be reused ("code reuse").
- Introduced a Python library, Folium for creating interactive HTML maps.
- Introduced while loops for repeating commands for an indefinite number of times.

## Practice Quiz & Final Questions

- Lightning rounds:
  - write as much you can for 60 seconds;
  - followed by answer; and
  - ▶ repeat.
- Past exams are on the webpage (under Final Exam Information).
