  - ► Minors: CSci 133 (More Python) & CSci 232 (Databases)

From our Syllabus.

Hunter College regards acts of academic dishonesty (e.g., plagiarism, cheating on examinations, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. All incidents of cheating will be reported to the Office of Student Conduct in the Vice President for Student Affairs and Dean of Students office.

<ロト < 同ト < 巨ト < 巨ト = 三 の < ○</p>

From our Syllabus.

Hunter College regards acts of academic dishonesty (e.g., plagiarism, cheating on examinations, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. All incidents of cheating will be reported to the Office of Student Conduct in the Vice President for Student Affairs and Dean of Students office.

 All suspected cases of cheating on the final exam (e.g. answer for a different version of the exam) will be reported.

<ロト < 同ト < 巨ト < 巨ト = 三 の < ○</p>

From our Syllabus.

Hunter College regards acts of academic dishonesty (e.g., plagiarism, cheating on examinations, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. All incidents of cheating will be reported to the Office of Student Conduct in the Vice President for Student Affairs and Dean of Students office.

- All suspected cases of cheating on the final exam (e.g. answer for a different version of the exam) will be reported.
- Students will get a PEN grade until the investigation is complete. This may delay registration.

## Today's Topics

- Recap: Incrementer Design Challenge
- C++: Basic Format & Variables
- ${\scriptstyle \bullet \ }$  I/O and Definite Loops in C++
- More Info on the Final Exam

## Today's Topics

#### • Recap: Incrementer Design Challenge

- C++: Basic Format & Variables
- ${\scriptstyle \bullet \ }$  I/O and Definite Loops in C++
- More Info on the Final Exam

• Simplest arithmetic: add one ("increment") a variable.

- Simplest arithmetic: add one ("increment") a variable.
- Example: Increment a decimal number:

イロト イロト イヨト イ

- Simplest arithmetic: add one ("increment") a variable.
- Example: Increment a decimal number:

```
def addOne(n):
m = n+1
return(m)
```

- Simplest arithmetic: add one ("increment") a variable.
- Example: Increment a decimal number:

```
def addOne(n):
m = n+1
return(m)
```

• Challenge: Write an algorithm for incrementing numbers expressed as words.

- Simplest arithmetic: add one ("increment") a variable.
- Example: Increment a decimal number:

```
def addOne(n):
m = n+1
return(m)
```

 Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"

- Simplest arithmetic: add one ("increment") a variable.
- Example: Increment a decimal number:

```
def addOne(n):
m = n+1
return(m)
```

 Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
Hint: Convert to numbers, increment, and convert back to strings. That is, "forty one" → 41 → 41 + 1 = 42 → "forty two"

CSci 127 (Hunter)

Nov 29 2022 6 / 49

- Simplest arithmetic: add one ("increment") a variable.
- Example: Increment a decimal number:

```
def addOne(n):
m = n+1
return(m)
```

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
  Hint: Convert to numbers, increment, and convert back to strings. That is, "forty one" → 41 → 41 + 1 = 42 → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers.

CSci 127 (Hunter)

Lecture 12

Nov 29 2022 6 / 49

イロト イポト イラト イラト・ラ

- Simplest arithmetic: add one ("increment") a variable.
- Example: Increment a decimal number:

```
def addOne(n):
m = n+1
return(m)
```

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
  Hint: Convert to numbers, increment, and convert back to strings. That is, "forty one" → 41 → 41 + 1 = 42 → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"

CSci 127 (Hunter)

 Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"
- Hint: Convert to numbers, increment, and convert back to strings.

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"
- Hint: Convert to numbers, increment, and convert back to strings.
- "1001"  $\rightarrow$  convert binary number "1001" to decimal number 9  $\rightarrow$  increase 9 to 10  $\rightarrow$  convert 10 to binary number "1010"  $\rightarrow$  "1010"

Pseudocode same for both questions:

Get user input.

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"
- Hint: Convert to numbers, increment, and convert back to strings.
- "1001"  $\rightarrow$  convert binary number "1001" to decimal number 9  $\rightarrow$  increase 9 to 10  $\rightarrow$  convert 10 to binary number "1010"  $\rightarrow$  "1010"

#### Pseudocode same for both questions:

- Get user input.
- 2 Convert to standard decimal number.

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"
- Hint: Convert to numbers, increment, and convert back to strings.
- "1001"  $\rightarrow$  convert binary number "1001" to decimal number 9  $\rightarrow$  increase 9 to 10  $\rightarrow$  convert 10 to binary number "1010"  $\rightarrow$  "1010"

#### Pseudocode same for both questions:

- Get user input.
- 2 Convert to standard decimal number.
- 3 Add one (increment) the standard decimal number.

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"
- Hint: Convert to numbers, increment, and convert back to strings.
- "1001"  $\rightarrow$  convert binary number "1001" to decimal number 9  $\rightarrow$  increase 9 to 10  $\rightarrow$  convert 10 to binary number "1010"  $\rightarrow$  "1010"

Pseudocode same for both questions:

- 1) Get user input.
- 2 Convert to standard decimal number.
- 3 Add one (increment) the standard decimal number.
- ④ Convert back to your format.

CSci 127 (Hunter)

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"
- Hint: Convert to numbers, increment, and convert back to strings.
- "1001"  $\rightarrow$  convert binary number "1001" to decimal number 9  $\rightarrow$  increase 9 to 10  $\rightarrow$  convert 10 to binary number "1010"  $\rightarrow$  "1010"

Pseudocode same for both questions:

- Get user input.
- 2 Convert to standard decimal number.
- 3 Add one (increment) the standard decimal number.
- ④ Convert back to your format.
- 5 Print the result.

CSci 127 (Hunter)

Lecture 12

Nov 29 2022 7 / 49

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"

Pseudocode same for both questions:

Get user input: "forty one"

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"

Pseudocode same for both questions:

- Get user input: "forty one"
- ② Convert to standard decimal number: 41

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"

Pseudocode same for both questions:

- Get user input: "forty one"
- ② Convert to standard decimal number: 41
- 3 Add one (increment) the standard decimal number: 42

CSci 127 (Hunter)

Lecture 12

Nov 29 2022 8 / 49

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"

Pseudocode same for both questions:

- Get user input: "forty one"
- ② Convert to standard decimal number: 41
- 3 Add one (increment) the standard decimal number: 42
- ④ Convert back to your format: "forty two"

CSci 127 (Hunter)

Lecture 12

Nov 29 2022 8 / 49

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"

Pseudocode same for both questions:

- Get user input: "forty one"
- ② Convert to standard decimal number: 41
- 3 Add one (increment) the standard decimal number: 42
- ④ Convert back to your format: "forty two"
- 5 Print the result.

CSci 127 (Hunter)

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"

Pseudocode same for both questions:

Get user input: "1001"

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"

Pseudocode same for both questions:

- Get user input: "1001"
- ② Convert to standard decimal number: 9

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"

Pseudocode same for both questions:

- Get user input: "1001"
- ② Convert to standard decimal number: 9
- 3 Add one (increment) the standard decimal number: 10

CSci 127 (Hunter)

Lecture 12

Nov 29 2022 9 / 49

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"

Pseudocode same for both questions:

- Get user input: "1001"
- ② Convert to standard decimal number: 9
- 3 Add one (increment) the standard decimal number: 10
- ④ Convert back to your format: "1010"

CSci 127 (Hunter)

Lecture 12

Nov 29 2022 9 / 49

- Challenge: Write an algorithm for incrementing numbers expressed as words. Example: "forty one" → "forty two"
- Challenge: Write an algorithm for incrementing binary numbers. Example: "1001"  $\rightarrow$  "1010"

Pseudocode same for both questions:

- Get user input: "1001"
- ② Convert to standard decimal number: 9
- 3 Add one (increment) the standard decimal number: 10
- ④ Convert back to your format: "1010"
- 5 Print the result.

## Today's Topics

- Recap: Incrementer Design Challenge
- C++: Basic Format & Variables
- I/O and Definite Loops in C++
- More Info on the Final Exam

## Challenge:

• Using what you know from Python, predict what the C++ code will do:

```
#include <iostream>
1
  using namespace std;
2
3
  int main ()
4
  Ł
5
     int year;
6
     cout << "Enter a number: ":</pre>
7
     cin >> year;
8
     cout << "Hello " << year << "!!\n\n";</pre>
9
     return 0;
10
   }
11
                                  イロト イポト イヨト イヨト
                                                     Sac
                                                  3
```

CSci 127 (Hunter)

## Structure of C++ Program

- $\square$  A simplest C++ program starts with main function. Put code inside the main function, enclosed in matched curly braces { and }.
- Need to # include < iostream > similar to import library in python 2
  - to use cin and cout.

1 2

3

4 5

6

8

9

- ▶ cin is standard input, like keyboard, cin >> means to pull contents from cin to a variable.
- cout is standard output, like screen, cout << means to push contents</p> to cout.
- ► Each statement in C++ ends with semicolon (;)
- 3 C++ is a strong type language, every variable, when declared, must declare with a type. For example, the return type of main function is int, the type of year is int.

```
#include <iostream>
     using namespace std;
      int main ()
        int year;
       cout << "Enter a number: ";</pre>
7
       cin >> year;
       cout << "Hello " << year << "!!\n\n";</pre>
       return 0;
                                                                                 <□> <□> <□> <□> <□> <□> <□>

• To print, we'll use cout <<:

```
#include <iostream>
 1
 2
      using namespace std:
 3
      int main ()
 4
      Ł
 5
        int year:
 6
       cout << "Enter a number: ";</pre>
 7
       cin >> year;
 8
       cout << "Hello " << vear << "!!\n\n":</pre>
 9
        return 0;
10
```

- Programs are organized in functions.
- Variables must be **declared**: int num;
- Many types available: int, float, char, ...
- Semicolons separate commands: num = 5; more = 2\*num;
- To print, we'll use cout <<: cout << "Hello!!";</li>

```
#include <iostream>
 2
     using namespace std:
 3
     int main ()
 4
 5
       int vear:
 6
       cout << "Enter a number: ";</pre>
 7
       cin >> year;
 8
       cout << "Hello " << vear << "!!\n\n":</pre>
 9
       return 0;
10
```

- Programs are organized in functions.
- Variables must be **declared**: int num;
- Many types available: int, float, char, ...
- Semicolons separate commands: num = 5; more = 2\*num;
- To print, we'll use cout <<: cout << "Hello!!";</li>
- To get input, we'll use cin >>:

```
#include <iostream>
 2
     using namespace std:
 3
     int main ()
 4
 5
       int year:
 6
       cout << "Enter a number: ";</pre>
 7
       cin >> year;
 8
       cout << "Hello " << vear << "!!\n\n":</pre>
 9
       return 0;
10
```

- Programs are organized in functions.
- Variables must be **declared**: int num;
- Many types available: int, float, char, ...
- Semicolons separate commands: num = 5; more = 2\*num;
- To print, we'll use cout <<: cout << "Hello!!";</li>
- To get input, we'll use cin >>: cin >> num;

```
#include <iostream>
 1
 2
     using namespace std:
 3
     int main ()
 4
 5
       int vear:
 6
       cout << "Enter a number: ";</pre>
 7
       cin >> year;
 8
       cout << "Hello " << vear << "!!\n\n":</pre>
 9
       return 0:
10
```

- Programs are organized in functions.
- Variables must be **declared**: int num;
- Many types available: int, float, char, ...
- Semicolons separate commands: num = 5; more = 2\*num;
- To print, we'll use cout <<: cout << "Hello!!";
- To get input, we'll use cin >>: cin >> num;
- To use those I/O functions, we put at the top of the program:

Sac

```
#include <iostream>
 1
 2
     using namespace std:
 3
     int main ()
 4
 5
       int vear:
 6
       cout << "Enter a number: ";</pre>
 7
       cin >> year;
 8
       cout << "Hello " << vear << "!!\n\n":</pre>
 9
       return 0;
10
```

- Programs are organized in functions.
- Variables must be **declared**: int num;
- Many types available: int, float, char, ...
- Semicolons separate commands: num = 5; more = 2\*num;
- To print, we'll use cout <<: cout << "Hello!!";
- To get input, we'll use cin >>: cin >> num;
- To use those I/O functions, we put at the top of the program: #include <iostream> using namespace std;

### Definite loops

```
//Another C++ program; Demonstrates loops
#include <iostream>
using nomespace std;
int main ()
{
    int i,j;
    for (i = 0; i < 4; i++)
    {
        cout << "The world turned upside down...\n";
    }
    for (j = 10; j > 0; j--)
    {
        cout << j << "";
    }
        cout << "Blast offl!" << endl;
    return 0;
}</pre>
```

General format:

. . .

```
for ( initialization ; test ; updateAction )
{
     command1;
     command2;
     command3;
```
