#### From email and tutoring.

- Should I be receiving email from this course? Absolutely!!! We send at least 2 emails each week with important information. If you do not receive them, please check your email associated with Blackboard and your Spam folder.
- Why so many quizzes and programming assignments?

2 / 40

#### From email and tutoring.

- Should I be receiving email from this course? Absolutely!!! We send at least 2 emails each week with important information. If you do not receive them, please check your email associated with Blackboard and your Spam folder.
- Why so many quizzes and programming assignments?
   Especially for introductory courses, research shows that a large number of frequent, low-stakes assignments is more effective than few large projects.

2 / 40

From email and tutoring.

• How do I prepare for the final exam?

CSci 127 (Hunter) Lecture 9 June 2021 3 / 40

From email and tutoring.

• How do I prepare for the final exam?

Assuming you are already attending lecture meetings and reading the Lab each class,

CSci 127 (Hunter) Lecture 9 June 2021 3 / 40

From email and tutoring.

• How do I prepare for the final exam?

Assuming you are already attending lecture meetings and reading the Lab each class,

► Take the quizzes, if you get a wrong answer, review it and make sure you understand.

CSci 127 (Hunter) Lecture 9 June 2021 3 / 40

From email and tutoring.

### • How do I prepare for the final exam?

Assuming you are already attending lecture meetings and reading the Lab each class,

- ► Take the quizzes, if you get a wrong answer, review it and make sure you understand.
- ► Work-on and understand the programming assignments.

3 / 40

From email and tutoring.

### • How do I prepare for the final exam?

Assuming you are already attending lecture meetings and reading the Lab each class,

- ► Take the quizzes, if you get a wrong answer, review it and make sure you understand.
- ► Work-on and understand the programming assignments.
- ► Take past exams available on the course webpage. Take it without looking at the answers (give yourself 1.5 hours) then compare with answer key.

3 / 40

From email and tutoring.

### • How do I prepare for the final exam?

Assuming you are already attending lecture meetings and reading the Lab each class,

- ► Take the quizzes, if you get a wrong answer, review it and make sure you understand.
- ► Work-on and understand the programming assignments.
- ► Take past exams available on the course webpage. Take it without looking at the answers (give yourself 1.5 hours) then compare with answer key.
- Condense the skeletal notes we provide for each lab into a smaller set of notes for quick reference.

3 / 40

From email and tutoring.

84
85
```

• The main() is written for you.

```
def main():
70
          inFile = input('Enter image file name: ')
          img = plt.imread(inFile)
          #Divides the image in 1/2, 1/4, 1/8, ... 1/2^8, and displays each:
          for i in range(8):
74
               img2 = img.copy()
                                   #Make a copy to average
               quarter(img2,i)
                                   #Split in half i times, and average regions
               plt.imshow(img2)
                                   #Load our new image into pyplot
78
               plt.show()
                                   #Show the image (waits until closed to continue)
80
          #Shows the original image:
          plt.imshow(img)
                                   #Load image into pyplot
          plt.show()
                                   #Show the image (waits until closed to continue)
84
```

- The main() is written for you.
- Only fill in two functions: average() and setRegion().

### Top-Down Design

 The last example demonstrates top-down design: breaking into subproblems, and implementing each part separately.

CSci 127 (Hunter) Lecture 9 June 2021 14 / 40

### Top-Down Design

- The last example demonstrates top-down design: breaking into subproblems, and implementing each part separately.
  - ► Break the problem into tasks for a "To Do" list.

CSci 127 (Hunter) Lecture 9 June 2021 14 / 40

- The last example demonstrates top-down design: breaking into subproblems, and implementing each part separately.
  - Break the problem into tasks for a "To Do" list.
  - ► Translate list into function names & inputs/returns.

14 / 40

- The last example demonstrates top-down design: breaking into subproblems, and implementing each part separately.
  - Break the problem into tasks for a "To Do" list.
  - ► Translate list into function names & inputs/returns.
  - ► Implement the functions, one-by-one.

- The last example demonstrates top-down design: breaking into subproblems, and implementing each part separately.
  - Break the problem into tasks for a "To Do" list.
  - Translate list into function names & inputs/returns.
  - ► Implement the functions, one-by-one.
- Excellent approach since you can then test each part separately before adding it to a large program.

- The last example demonstrates top-down design: breaking into subproblems, and implementing each part separately.
  - Break the problem into tasks for a "To Do" list.
  - Translate list into function names & inputs/returns.
  - ► Implement the functions, one-by-one.
- Excellent approach since you can then test each part separately before adding it to a large program.
- Very common when working with a team: each has their own functions to implement and maintain.

14 / 40

• Write the missing functions for the program:

• Write the missing functions for the program:

```
def main():
   tess = setUp() #Returns a purple turtle with pen up.
   for i in range(5):
       x,y = getInput() #Asks user for two numbers.
       markLocation(tess,x,y) #Move tess to (x,y) and stamp.
```

June 2021

CSci 127 (Hunter)

# Group Work: Fill in Missing Pieces

```
def main():
    tess = setUp()    #Returns a purple turtle with pen up.
    for i in range(5):
        x,y = getInput()    #Asks user for two numbers.
        markLocation(tess,x,y) #Move tess to (x,y) and stamp.
```

# Group Work: Fill in Missing Pieces

Write import statements.

import turtle

```
def main():
    tess = setUp()  #Returns a purple turtle with pen up.
    for i in range(5):
        x,y = getInput()  #Asks user for two numbers.
        markLocation(tess,x,y) #Move tess to (x,y) and stamp.
```

# Third Part: Fill in Missing Pieces

- Write import statements.
- 2 Write down new function names and inputs.

```
import turtle
def setUp():
    #FILL IN
def getInput():
    #FILL IN
def markLocation(t,x,y):
    #FILL IN
```

CSci 127 (Hunter)

```
def main():
    tess = setUp()  #Returns a purple turtle with pen up.
    for i in range(5):
        x,y = getInput()  #Asks user for two numbers.
        markLocation(tess,x,y) #Move tess to (x,y) and stamp.
```

Lecture 9

June 2021

19 / 40

# Third Part: Fill in Missing Pieces

- Write import statements.
- Write down new function names and inputs.
- 3 Fill in return values.

```
import turtle
def setUp():
    #FILL IN
    return(newTurtle)
def getInput():
    #FILL IN
    return(x,y)
def markLocation(t,x,y):
    #FILL IN
```

# Third Part: Fill in Missing Pieces

- Write import statements.
- Write down new function names and inputs.
- Fill in return values.

```
Fill in body of functions.
import turtle
def setUp():
    newTurtle = turtle.Turtle()
    newTurtle.color("purple")
    newTurtle.penup()
    return(newTurtle)
def getInput():
    x = int(input('Enter x: '))
    y = int(input('Enter y: '))
    return(x,y)
def markLocation(t,x,y):
    t.goto(x,y)
    t.stamp()
def main():
```

CSci 127 (Hunter)

tess = setUp() #Returns a purple turtle with pen up. for i in range(5):

Lecture 9

June 2021

 Write a function that takes a number as an input and prints its corresponding name.

- Write a function that takes a number as an input and prints its corresponding name.
- For example,

- Write a function that takes a number as an input and prints its corresponding name.
- For example,
  - ► num2string(0) returns: zero

- Write a function that takes a number as an input and prints its corresponding name.
- For example,
  - ▶ num2string(0) returns: zero
  - ▶ num2string(1) returns: one

- Write a function that takes a number as an input and prints its corresponding name.
- For example,
  - ▶ num2string(0) returns: zero
  - ▶ num2string(1) returns: one
  - ▶ num2string(2) returns: two

- Write a function that takes a number as an input and prints its corresponding name.
- For example,
  - ▶ num2string(0) returns: zero
  - ▶ num2string(1) returns: one
  - ▶ num2string(2) returns: two
- You may assume that only single digits, 0,1,...,9, are given as input.

CSci 127 (Hunter) Lecture 9

# Folium

- A module for making HTML maps.
- It's a Python interface to the popular leaflet.js.
- Outputs .html files which you can open in a browser.
- An extra step:

26 / 40

## **Folium**

- A module for making HTML maps.
- It's a Python interface to the popular leaflet.js.
- Outputs .html files which you can open in a browser.
- An extra step:

 $Write \rightarrow Run \rightarrow Open .html code. program. in browser.$ 

#### Demo

(Map created by Folium.)

• To use: import folium

# **Folium**

- To use:
  - import folium
- Create a map:

myMap = folium.Map()

# **Folium**

- To use:
  - import folium
- o Create a map: myMap = folium.Map()
- Make markers:

```
newMark = folium.Marker([lat,lon],popup=name)
```

28 / 40

## **Folium**

- To use: import folium
- o Create a map: myMap = folium.Map()
- Make markers: newMark = folium.Marker([lat,lon],popup=name)
- Add to the map: newMark.add\_to(myMap)

28 / 40

### **Folium**

- To use: import folium
- o Create a map: myMap = folium.Map()
- Make markers: newMark = folium.Marker([lat,lon],popup=name)
- Add to the map: newMark.add\_to(myMap)
- Many options to customize background map ("tiles") and markers.

28 / 40

#### Demo

(Python program using Folium.)

# In Pairs of Triples

#### Predict which each line of code does:

```
m = folium.Map(
    location=[45.372, -121.6972],
    zoom start=12.
    tiles='Stamen Terrain'
folium.Marker(
    location=[45.3288, -121.6625],
    popup='Mt. Hood Meadows',
    icon=folium.Icon(icon='cloud')
).add to(m)
folium.Marker(
    location=[45.3311, -121.7113],
    popup='Timberline Lodge',
    icon=folium.Icon(color='green')
).add to(m)
folium.Marker(
    location=[45.3300, -121.6823],
    popup='Some Other Location',
    icon=folium.Icon(color='red', icon='info-sign')
).add to(m)
```

(example from Folium documentation)

CSci 127 (Hunter) Lecture 9

# Today's Topics

- Recap: Functions & Top Down Design
- Mapping GIS Data
- Random Numbers
- Indefinite Loops

June 2021

31 / 40

CSci 127 (Hunter) Lecture 9

# Python's random package

 Python has a built-in package for generating pseudo-random numbers.

import turtle
import random

trey = turtle.Turtle()

trey.speed(10)

for i in range(100):

trey.forward(10)

a = random.randrange(0,360,90)

trey.fright(0)

# Python's random package

- Python has a built-in package for generating pseudo-random numbers.
- To use:

import random

import turtle
import random

trey = turtle.Turtle()

trey.speed(10)

for i in range(100):

trey.forward(10)

a = random.randrange(0,360,90)

trey.right(0)

32 / 40

- Python has a built-in package for generating pseudo-random numbers.
- To use:

import random

 Useful command to generate whole numbers: random.randrange(start,stop,step)
 which gives a number chosen randomly from the specified range.

```
import turtle
import random

trey = turtle.Turtle()
trey.speed(10)

for i in range(100):
    trey.forward(10)
    a = random.randrange(0.360.90)
    a = random.randrange(0.360.90)
```

trey.right(a)

June 2021

32 / 40

 Python has a built-in package for generating pseudo-random numbers.

To use:

import random

 Useful command to generate whole numbers: random.randrange(start,stop,step)
 which gives a number chosen randomly from the specified range.

Useful command to generate real numbers:

```
import turtle
import random

trey = turtle.Turtle()
trey.speed(10)
for i in range(100):
trey.forward(10)
a = random.randrange(0,360,90)
trey.riph(1)
```

 Python has a built-in package for generating pseudo-random numbers.

To use:

import random

 Useful command to generate whole numbers: random.randrange(start,stop,step)
 which gives a number chosen randomly from the specified range.

Useful command to generate real numbers:

random.random()

which gives a number chosen (uniformly) at random from [0.0,1.0).

4 D > 4 A > 4 B > 4 B > -

90 Q

import turtle
import random

trey = turtle.Turtle()
trey.speed(10)

for i in range(100):
 trey.forward(10)
 a = random.randrange(0,360,90)
 a = random.randrange(0,360,90)

trey.right(a)

 Python has a built-in package for generating pseudo-random numbers.

To use:

import random

Useful command to generate whole numbers:

random.randrange(start, stop, step) which gives a number chosen randomly from the specified range.

Useful command to generate real numbers:

random.random()

which gives a number chosen (uniformly) at random from [0.0,1.0).

 Very useful for simulations, games, and testing.

```
import turtle
import random
trey = turtle.Turtle()
trev.speed(10)
for i in range(100):
  trey.forward(10)
  a = random.randrange(0.360.90)
```

trey.right(a)

#### Trinket

CSci 127 (Hunter)

# Today's Topics

- Recap: Functions & Top Down Design
- Mapping GIS Data
- Random Numbers
- Indefinite Loops

CSci 127 (Hunter) Lecture 9 June 2021 34 / 40

#### Challenge:

Predict what the code will do:

```
dist = int(input('Enter distance: '))
while dist < 0:
    print('Distances cannot be negative.')
    dist = int(input('Enter distance: '))
print('The distance entered is', dist)</pre>
```

4□ b 4 □ b 4 ≥ b 4 ≥ b 2 9 9 0 0

CSci 127 (Hunter) Lecture 9 June 2021 35 / 40

# Python Tutor

```
dist = int(input('Enter distance: '))
while dist < 0:
    print('Distances cannot be negative.')
    dist = int(input('Enter distance: '))
print('The distance entered is', dist)</pre>
```

(Demo with pythonTutor)

CSci 127 (Hunter) Lecture 9 June 2021 36 / 40

```
dist = int(input('Enter distance: '))
while dist < 0:
    print('Distances cannot be negative.')
dist = int(input('Enter distance: '))
print('The distance entered is', dist)

#Spring 2012 Final Exam, #8
nums = [1,4,8,6,5,2,9,8,12]
print(nums)
while i < len(nums)-1:
    if nums[i] < nums[i+1]:
        nums[i+1] = nums[i+1], nums[i]
j-int(nums)</pre>
```

 Indefinite loops repeat as long as the condition is true.

CSci 127 (Hunter)

```
dist = int(Input('Enter distance: '))
while dist -0:
print('Distances cannot be negative.')
dist = int(input('Enter distance: '))
print('The distance entered distance: '))
print('The distance entered is', dist)
#Spring 2012 Final Exam, #8
nums = [1,4,8,6,5,2,9,8,12]
print(nums)
while i < len(nums)-1:
    if nums[i]: nums[i+1]: nums[i]
    inums[i]: nums[i+1]: nums[i]
    inums[i]: nums[i+1]: nums[i]
    inums[i]: nums[i+1]: nums[i]
    inums[i]: nums[i+1]: nums[i]
```

- Indefinite loops repeat as long as the condition is true.
- Could execute the body of the loop zero times, 10 times, infinite number of times.

- Indefinite loops repeat as long as the condition is true.
- Could execute the body of the loop zero times, 10 times, infinite number of times.
- The condition determines how many times.

CSci 127 (Hunter)

```
dist = int(input('Enter distance: '))
while dist - 0:
print('Distances cannot be negative.')
dist = int(input('Enter distance: '))
print('The distance entered is', dist)

#Spring 2012 Final Exam, #8
nums = [1,4,8,6,5,2,9,8,12]
print(nums)

#If nums[1] = nums[i+1]
nums[1] = nums[i+1], nums[i]
i=i=1], nums[i+1] = nums[i+1], nums[i]
print(nums)
```

- Indefinite loops repeat as long as the condition is true.
- Could execute the body of the loop zero times, 10 times, infinite number of times.
- The condition determines how many times.
- Very useful for checking input, simulations, and games.

37 / 40

```
dist = int(input('Enter distance: ')
while dist <0:
    print('Distances cannot be negative.')
dist = int(input('Enter distance: '))
print('The distance entered is', dist)

#Spring 2012 Final Exam, #8
nams = [1,4,8,6,5,2,9,8,12]
print(nams)
while i < len(nams)-1:
    if nams[i] : nams[i+1]:
    nams[i], nams[i+1] = nams[i+1], nams[i]
    it=1</pre>
```

- Indefinite loops repeat as long as the condition is true.
- Could execute the body of the loop zero times, 10 times, infinite number of times.
- The condition determines how many times.
- Very useful for checking input, simulations, and games.
- More details next lecture...

 Top-down design: breaking into subproblems, and implementing each part separately.

CSci 127 (Hunter) Lecture 9 June 2021 38 / 40

- Top-down design: breaking into subproblems, and implementing each part separately.
- Excellent approach: can then test each part separately before adding it to a large program.

- Top-down design: breaking into subproblems, and implementing each part separately.
- Excellent approach: can then test each part separately before adding it to a large program.
- When possible, design so that your code is flexible to be reused ("code reuse").

- Top-down design: breaking into subproblems, and implementing each part separately.
- Excellent approach: can then test each part separately before adding it to a large program.
- When possible, design so that your code is flexible to be reused ("code reuse").
- Introduced a Python library, Folium for creating interactive HTML maps.

- Top-down design: breaking into subproblems, and implementing each part separately.
- Excellent approach: can then test each part separately before adding it to a large program.
- When possible, design so that your code is flexible to be reused ("code reuse").
- Introduced a Python library, Folium for creating interactive HTML maps.
- Introduced while loops for repeating commands for an indefinite number of times.

# Practice Quiz & Final Questions

- Lightning rounds:
  - write as much you can for 60 seconds;
  - ► followed by answer; and
  - ► repeat.
- Past exams are on the webpage (under Final Exam Information).

39 / 40

CSci 127 (Hunter) Lecture 9 June 2021

# Practice Quiz & Final Questions

- Lightning rounds:
  - write as much you can for 60 seconds;
  - ► followed by answer; and
  - ► repeat.
- Past exams are on the webpage (under Final Exam Information).
- Theme: Functions & Top-Down Design (Summer 18, #7).

CSci 127 (Hunter) Lecture 9 June 2021 39 / 40

Before next lecture, don't forget to:

Review this week's Lab

CSci 127 (Hunter) Lecture 9 June 2021 40 / 40

Before next lecture, don't forget to:

- Review this week's Lab
- Take the Lab Quiz on Gradescope by 9pm on today

CSci 127 (Hunter) Lecture 9 June 2021 40 / 40

#### Before next lecture, don't forget to:

- Review this week's Lab
- Take the Lab Quiz on Gradescope by 9pm on today
- Submit this class's 5 programming assignments (programs 41-45)

CSci 127 (Hunter) Lecture 9 June 2021 40 / 40

#### Before next lecture, don't forget to:

- Review this week's Lab
- Take the Lab Quiz on Gradescope by 9pm on today
- Submit this class's 5 programming assignments (programs 41-45)
- Attend our tutoring sessions for help!!!
